Re: Response to EPA's Notice of Preliminary Findings, Silgan Containers Manufacturing

Corporation, Burlington, IA 52601

EPA ID: IAR000521237

Dear Mr. Gary R. Witkovski:

Silgan Containers Manufacturing Corporation – Burlington, IA ("Silgan") responds herein to the above-referenced Notice of Preliminary Findings (NOPF) pursuant to the Resource Conservation and Recovery Act ("RCRA") inspection on May 2, 2017. The EPA's NOPF is directed to Silgan's facility located at 3725 Division St, Burlington, IA 52601.

These responses are based upon a review of company files that are known to likely contain documents, records, and information relevant to the Notice of Preliminary Findings. Silgan reserves the right to supplement this response consistent with EPA's request.

<u>Finding 1:</u> Failure to label a satellite container with the words "Hazardous Waste" or have its contents identified (40 CFR 262.34(c) (1) (ii)).

A. Silgan had two drums of Non-Hazardous Solid Draw & Ironed (D&I) Waste without labels on them.

Response: Silgan placed Non-Hazardous Labels on the drums identifying them as Solid Draw & Ironed (D&I) Waste.

<u>Finding 2:</u> Failure to keep a satellite container closed except when adding or removing waste (40 CFR 262.34 (c) (1) (i) – 40 CFR 265.173 (a)).

A. Silgan had a satellite container holding Non-Hazardous Solid D&I waste open with the drum lid resting on top of the drum.

Response: Silgan closed the drum with a locking drum ring.

RCRA 05/17/2017

Finding 3: Failure to mark a hazardous waste container with an accumulation start date (40 CFR 262.34 (a) (2)).

A. Silgan had eight (8) containers, holding Hazardous Liquid D&I waste, without dates on the hazardous waste labels.

Response: Silgan placed dates on the drum labels. Dates were traced back to when the coatings were run.

<u>Finding 4:</u> Failure to have adequate weekly inspections at a hazardous waste container accumulation area (40 CFR 262.34 (a) (1) (i) - 40 CFR 265.17).

A. Silgan performed weekly inspections and documented them, but overlooked several drums when performing the inspection(s).

Response: Silgan placed dates on the drum when they were generated. Dates were traced back to when certain coatings were run. Retraining on waste inspections was performed on May 4, 2017.

Finding 5: Failure to provide adequate aisle space for type of container management and emergency equipment used (40 CFR 262.34(a) (4), 265.35).

A. Hazardous waste containers were stored at the time of inspection with the inability to walk around the containers.

Response: Silgan positioned the drums with 3 feet of aisle space on each side of the containers.

Pursuant to EPA's NOPF, Silgan may produce records, documents, or copies in support of the responses above.

We trust the information provided sufficiently responds to the EPA's request to respond to the Notice of Preliminary Findings. Should you require any further information or if you have questions, please call me at 262-569-5857 or contact me at jkania@silgancontainers.com.

Thank You.

Jon,

We are in the process of re-running the flashpoints. I believe we have figured out the error. I watched the analyst run the flashpoint on one of the samples and it produced a blue "halo" around the opening of the cup. The analyst mistakenly recorded that as the flashpoint. It is not.

I am asking our QA officer to observe the re-running of the samples and will get you the revised results as soon as I can.

I apologize for this error and will get it fixed ASAP.

Thank you, David E. Norris Client Services Manager ENVision Laboratories, Inc. 1439 Sadlier Circle West Drive Indianapolis, IN 46239

David,

We suspect something is wrong with these results. We submitted split samples of the same material to another lab in which it tested out at 233F. They used ASTM 3278 and Envision used 1010A-M. If you could please give us a detailed reason for the difference.

Thanks.
